

The future of ecommerce in Spain

Executive Summary (I)

Ecommerce has redefined the retail world. In Spain, 49% of shoppers say that their **online purchases have increased** in the last year, reflecting the upward trend of the online channel.

But what are the keys to understanding this success? Today's ecommerce is based on three main pillars: **convenience**, **price and variety**. Results reveal that 59% of buyers feel that online shopping is **more convenient**, while 47% believe there are more **discounts and promotions**. Additionally, 44% of shoppers agree that there is a **greater variety of products**. And **marketplaces** respond very well to these needs.

The purchasing process is divided into three distinct phases:

Before the purchase, up to 73% of **Spanish consumers seek for information** about the purchase they are going to make, so it is essential to be able to offer it to them. It is also important to be present in their minds, offering them information about our products or promotions, among others, but without being too invasive: email, with an appropriate frequency, becomes the perfect way to achieve this.

During the purchase, the Spanish shopper is **mainly single-channel**, although there is a trend towards the integration of physical and digital. **Price** is a very important driver for them, as it is the **first thing they look at** when buying online: up to 60% of Spanish shoppers sort products on the page by price. Compared to other European regions such as Benelux or France, they are **more frequent shoppers** and more open to **categories such as fashion or technology**.

When it comes to paying, **credit card** (75% of users) and **digital wallets** such as Google Pay, Apple Pay or PayPal (50%) are a requirement. They are **not as likely to finance their online purchases** as in the rest of Europe, but still 1 in 3 shoppers do so. Still related to price, shipping is a crucial part for those buyers: 61% recognize that it is **important to be able to choose a free delivery option**.

After the purchase, it will be key that the **product meets their expectations** or else up to 79% will return the order, even if they are not particularly comfortable with it.

Executive Summary (II)

With an eye on the future, **innovation** is going to be key to make it even easier for online users. There is still a great opportunity to surprise them, as 4 out of 10 online shoppers have not experimented with new technologies (AI, AR, voice shopping...) during their shopping process. However, shoppers are curious about them: up to 67% of shoppers say they are **interested in what these technologies have to offer**. These technologies can be particularly useful in providing a **better understanding of what the product to be purchased is like**, for example, through 360° photographs or the possibility of seeing the product in augmented reality.

Another of the basic pillars of eCommerce for the future is sustainability, understood as a **commitment to the equal development** of society and care for environment. eCommerce is perceived as a facilitator for this, and 43% of Spaniards say that online shopping has helped them to make more sustainable purchases. Compared to other European countries, Spanish people pay more attention to social reasons, such as ensuring that the brands they buy do not exploit children or that their workers have good working conditions.

Second-hand is a market that also has its place among Spanish online shoppers: **half of them** declare they have bought and sold second-hand products in the last year, with **fashion** being the category with the highest acceptance in this market. However, beyond caring for the planet, for them second hand mainly responds to **personal economy improving**.

01 Introduction & methodology

Methodology

Target

- Individuals 16 to 65 years old, who have made an online purchase in the last year, and living in Spain, France, Italy, Belgium or the Netherlands.
- N^{total} = 5001 interviews (N^{Spain} = 1000 interviews)

Technique

- Computer-Assisted Web Interview (CAWI)
- Quotas by gender, age and region to ensure sample representativity

Fieldwork

 Fieldwork was conducted between March 27th and April 11th.

The error margin for overall results per brand (n=1000), if the sample had been selected by random pure method, would be of \pm 3,16% in case of maximum indetermination (p=q=50 %) and under a confidence interval of 95%.

Targeted countries

Spain

Italy

France

Belgium

Q3. Which gender do you most identify with? / Q4. How old are you? / Q6. Where do you live?

How to read these results?

To provide a more complete picture, we have compared the results against the average of the 5 countries involved in this study. Thus, the symbols \uparrow / \checkmark represent a significantly higher or lower value compared to this average at a 95% confidence interval.

The average of the 5 countries is also included for the main variables

Today's ecommerce 02 Purchase Process

We are facing a new reality

of shoppers state that online shopping has changed the way they shop physically

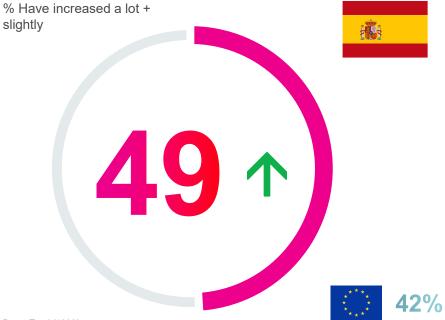

Ecommerce has redefined the retail world.

Shoppers expect brands to deliver a world of global experiences in a connected world...

And we must be ready to enter the third era of digital retail

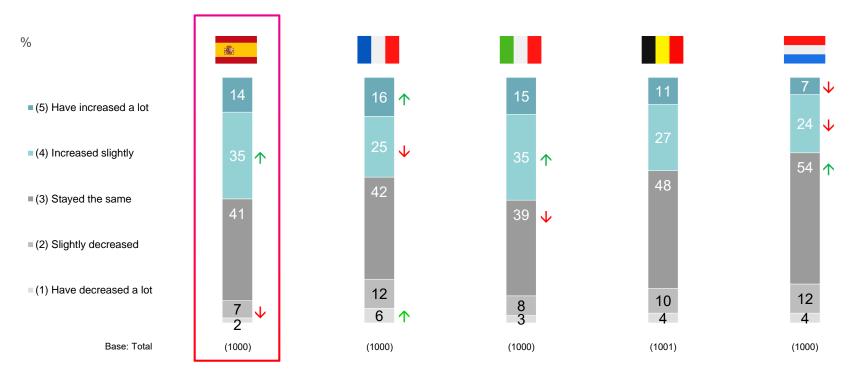

49% of Spanish population has increased its online purchases

Base: Total (1000)

Q20. Compared to the previous year, do you consider that your online purchases this year... (Have increased a lot / Increased slightly / Stayed the same / Slightly decreased / Have decreased a lot)

In fact, Spain, along with Italy, shows the largest increase in online purchases in the last year.

Q20. Compared to the previous year, do you consider that your online purchases this year... (Have increased a lot / Increased slightly / Stayed the same / Slightly decreased / Have decreased a lot)

Today's ecommerce: online purchase drivers

Spanish shoppers embrace the digital channel to make their purchases, based mainly on three pillars: convenience, price and variety.

Convenience

These are faster purchases, which can be made from any location and where it is easier to find what they are looking for.

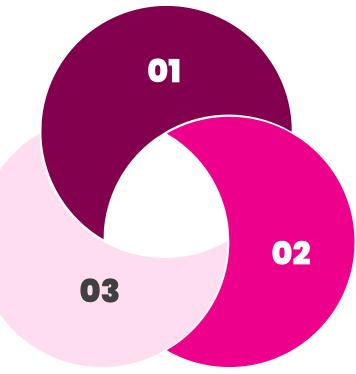

02.

Price

There is greater availability of offers and the prices offered are more competitive compared to the physical environment.

03. Variety

Not only is there a greater variety of products in general, but there is also a greater availability of exclusive products.

They have increased online shopping because it offers convenience, better prices and greater variety

%		- (1)				
It is more convenient	53	59 🛧	53	44 🗸	55	55
There are more offers and discounts	44	47	41	49 🛧	41	39

When it comes to online shopping, the European consumer is sensitive to price.

In Spain the quality of the materials and the return conditions also play an important role in their decision.

Q25. When you buy a product online, the first thing you look for is that...

Price is important: up to 60% of Spanish online shoppers use it to filter products when buying online.

Q26. When shopping online... (Always / Almost every time / Occasionally / Practically never / Never)

Purchase process

3 main steps

1. 2. 3.

Before the purchase

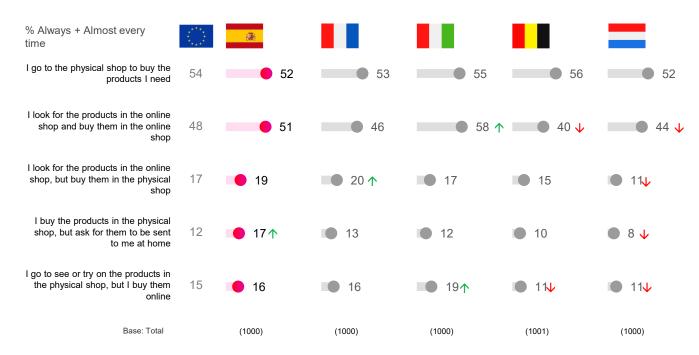

- Information they seek
- Touchpoints to keep them informed
- Filters they use

During the purchase

- Channel
- Key elements they pay attention to
- Type of product they buy

After the purchase

Consumers are single-channel: they generally look for and buy products in the same store, whether online or physical.

Q22. When buying new products, how often have you done each of the following? (Always / Almost every time / Occasionally / Practically never / Never)

Global eCommerce Study

Food is the most popular category for online shopping, but other categories such as fashion, leisure and culture or cosmetics are also very popular among online shoppers in Spain.

% Purchase frequency (High-Freq)

Base: Total (1000)

Q17. What kind of products have you bought online in the past year?

Q18. How often have you purchased each of the following categories/types of products in the last 12 months? (High-Freq: Once a week or more, once every 2 weeks, once a month / Moderate: Once every 3 months, once every 6 months / Low-Freq: Once per year, less frequent)

Luxury products category is the less considered when buying online in southern Europe

Q17. What kind of products have you bought online in the past year? / Q19. And, of the following, which one(s) would you never consider buying online?

Q47. Now, we will look at some of the technological innovations that may be present in the online shopping process. Which of the following tools and options for online shopping do you know, even if you have never experienced them? / Q49. Which of the following have you personally tried during your online shopping? / Q50. Which of the following would you like to see available on the websites where you usually shop?

51%

find interesting the possibility to purchase directly through streaming platforms such as Twitch, YouTube or TikTok

Base: Total (1000)

Q55. Live shopping is a new modality in which, through streaming platforms (such as Twitch, YouTube, TikTok...) people show live their shopping experience, so that people can know more about the product (sizes, materials, ideas...). To what extent do you find this interesting?

Global eCommerce Study

Key takeaways

Some final thoughts...

Maximizing the potential of ecommerce requires a **deep understanding** of **consumers' needs and behaviors**. From product information to purchase experience, every detail counts in **shaping online shopping success**.

1. Convenience, price & variety

Are the main drivers of online shopping among Spanish consumers.

Conline shoppers are informed and demanding

Most buyers search for information before making their purchase, but still 1 out of 3 return the order because it does not meet their expectations.

Provide relevant information

3

However, be careful not to saturate the buyer, as this can create barriers to purchase.

4. Not every category has equal opportunities

Fashion, technology and travel are doing very well on the online channel, but categories such as luxury and healthcare have yet to catch on.

What about the future?

As we know, ecommerce is a **growing market**, but it still has many **challenges and opportunities** to be addressed.
